LUCKY MALL (MY) SDN BHD / Project Engineer & UI/UX Specialist
December 2025 - Present, Bukit Bintang Kuala Lumpur

Core Achievement: Website Development and Architecture Optimization

- **Spearheaded the end-to-end UI/UX redesign and web application deployment for the core e-commerce platform (https://luckymall.my)**; utilized advanced front-end principles to optimize responsive interfaces across desktop and mobile, ensuring seamless cross-platform performance.

Cross-Functional Vendor Management & QA Testing (App v2 & v3)

- Appointed as the central Technical Project Manager and intermediary bridge between external software vendor agencies, internal corporate IT departments, and the CEO.
- Successfully stabilized and optimized the Group Buying Application (App v2) post-launch; established rigid Quality Assurance (QA) testing protocols, conducted comprehensive UAT (User Acceptance Testing) to identify logic bugs, and coordinated cross-functional hotfixes.
- Currently piloting the end-to-end product lifecycle of the Subscription-Model E-Commerce Engine (App v3); defining technical scopes, auditing resource requests, and provisioning enterprise IT resources to external developers to guarantee milestone deployment
- Ensure the application, servers, and backend systems worked smoothly together.
- Coordinated with vendors and monitored project schedules, progress, and deliverables to ensure timely completion.

Backend Systems Administration & Data Anomaly Resolution

- Owned the administration, real-time monitoring, and integrity of backend data systems; served as the single point of contact and technical lead for cross-departmental data anomalies, conducting root-cause analysis and executing immediate system debugging.
- Search Engine Optimization (SEO)
    - Continuously implemented and optimized SEO strategies, including technical SEO improvements and keyword optimization, to improve Google search rankings and increase organic traffic to the Lucky Mall website.

Practical Generative AI (Gen-AI) Automation & Engineering

- Researched and deployed operational efficiency solutions using front-end open-source LLMs (OpenClaw, Hermes, and Codex) to eliminate manual corporate overhead and drive digital transformation .
- Project 1: WhatsApp Automation
    - Integrated Hermes AI with WhatsApp to provide 24/7 automated template reply for customer support, enabling instant responses to customer inquiries.
- Project 2: AI-Driven Influencer Marketing Analytics
    - Using KeFanFan and Hermes to evaluate influencer profile based on their follower count, account status, and other key metrics to improving influencer selection for marketing campaigns.
    - Engineered an automated data-parsing engine using Hermes to dynamically filter, parse, and synthesize large-scale multi-Excel databases into executive summaries, minimizing manual filtering time .
- Project 3: AI-Driven develop Mobile App
    - Using Codex to update & modify and develop company mobile app.

Reason for leaving :
Management has announced that company would be ceasing its operations in Malaysia and relocating its business activities back to Hong Kong
